Transporeon Group Asia Pacific appoints Han Hee Ting as new Business Development Director

Transporeon Group Asia Pacific Pte Ltd has appointed an experienced supply chain professional to its senior management team based in Singapore, to further strengthen the company's growing presence in the region.

Han Hee Ting's appointment will enable Transporeon Group to leverage his more than 20 years experience in supply chain management.

"Han's appointment is a key development in Transporeon Group's aim to build a strong presence in the transport and logistics sector in the Asia Pacific region. His wealth of experience in supply chain solutions and his network of global blue-chip clients will help us achieve that goal", said Mario Sander, Managing Director, Transporeon Group Asia Pacific Pte Ltd .

"Transporeon Group is a market leader in Europe and it is an exciting time for me to join the company as they look to introduce their suite of world class transport and logistics solutions to customers in Asia", said Han.

Han previously held senior management roles for DHL Exel Supply Chain and APL Logistics in Asia Pacific.

Transporeon Group is providing the web-based platforms "Transporeon" and "Ticontract" which are the leading software solutions that optimize transport logistics processes and communications between industrial companies, trading companies, carriers, drivers and consignees.

Ticontract and Transporeon take companies right from the start of the tendering process through to auditing and reporting and ensure efficient operations at the loading ramps. By expanding into the Asian market, the group aims to improve the service it offers to existing customers there, acquire new customers and thus ensure that the strategic growth of the Transporeon Group continues.

Particularly in Asia, global transport management systems are either insufficiently well established or they are very fragmented, yet demand in the market is high.

About the Transporeon Group

The web-based solutions of the Transporeon Group offer functionality for tendering processes, management of freight rates, order placement, time slot booking and shipment tracking (Transport Visibility) and invoice controlling. The idea behind Ticontract and Transporeon is to link manufacturers, retailers and wholesalers with their carriers over the Internet, and the company has grown steadily since starting up in the year 2000. With head offices in Ulm (Transporeon) and Kempten (Ticontract), it is now the European market leader in e-logistics with a growing presence in Asia and the USA. The group's platforms currently link a total of over 600 shippers, 28,000 carriers and 70,000 users in 70 countries.
